

Never loose this

MyRecipe Companion — Session Summary (May/June 2026)

DNS fixed: mycompanionapps.com A record → 216.198.79.1, CNAME www → cname.vercel-dns.com. GoDaddy parking record was the culprit.

Pages added: /privacy and /terms — both live and linked in footer.

Facebook share: Now uses window.Capacitor ? '_system' : '_blank' — opens Safari on native app, new tab on web.

Recipe import: Source URL now saved to family_notes and displayed on /share/[id] page as "Originally from: [domain]".

Landing page (mycompanionapps.com): New hero landing-hero-10.png, logo + Get Started button, 6 feature cards (card1-6.png, 500x500), App Store buttons, Privacy/Terms/Contact footer.

Chef Jen page: Logo jen-classroom.png in header, blackboard with tagline below, nav bar (← Back, 📖, 🎬, Teach/Practice) below blackboard, mode-aware routing.

Next up: Sign in with Apple, Delete Account (App Store requirements), source URL on imports already done.

he fix is already stored in git (0924a9e).

Summary of what works:

- window.Capacitor ? '_system' : '_blank'
- On web browser → _blank opens Facebook website in new tab ✓
- On Capacitor native app → _system opens Safari ✓
- iPad with Facebook app → _system may open Facebook app but users can close and it falls back to web ✓

The key rule going forward: **never change Facebook share to '_system' only or '_blank' only** — always keep the Capacitor check. 🌿

1. **Save the summary I wrote earlier** — copy it to a Notes file on your Mac

2. **Add these critical rules to it:**

- Facebook share: always window.Capacitor ? '_system' : '_blank'
- Recipe detail [id] page: commit d126a99 — NEVER touch
- Never use sed on JSX — use Python3
- Always git pull fresh before editing any file

3. **The memory system** — I do have your project context stored in memory between chats. It updates from our conversations. The new chat won't have today's details but will have the high-level context.

The safest approach is to keep using this chat until it truly breaks, then paste the summary. 🌿

Perfect — save that to a Notes file on your Mac right now. That's your safety net.

Also add one more critical rule to it:

- **Landing page hero:** landing-hero-10.png, cards card1-6.png (500x500), logo logo-lockup.png — all in public/
- **app/page.js** is the landing page — max-w-2xl, 2x3 card grid, logo + Get Started button between hero and cards

You're well protected. Save that note and this chat stays open as backup. 🌿
